# pegasus OPERATIONS<sup>II</sup>

Today it is more apparent than ever that in order to keep pace with the rapid changes in the way that business is carried out — and to take full advantage of every opportunity — companies are increasingly reliant on Windows and Microsoft-based applications, networking, E-mail and the Internet.

For today's manufacturer it is a pre-requisite to produce quality products at a competitive price for time-critical and price-driven customers. Pegasus Operations II provides companies with the technology required to manage this day-to-day process, delivering a real competitive advantage.

## ADAPTABLE TO CHANGE

Pegasus Software is a leading supplier of manufacturing, accounting, payroll and eCommerce solutions because it has developed applications that can adapt to the changing demands of its customers' businesses. Pegasus Operations II is no exception. It is a modular solution which enables businesses to select the components that match their current business model, and go on to add further functionality as their requirements change. This means that the capability or capacity of a system can be seamlessly expanded while safeguarding the investment.

## PICKING THE RIGHT SOFTWARE

Picking the right software can transform a hectic process, where profitability is on a constant knife-edge, into a more controllable and manageable proposition. Pegasus Operations II is a complete production control system that integrates manufacturing management, order processing and quality control to the accounting system. It is a modular system that processes data from quotations to sales orders and scheduling, through MRP and production, to delivery and invoicing. The profit on jobs can be assessed, purchase invoices matched against goods inward receipts and stock control can be actively managed.

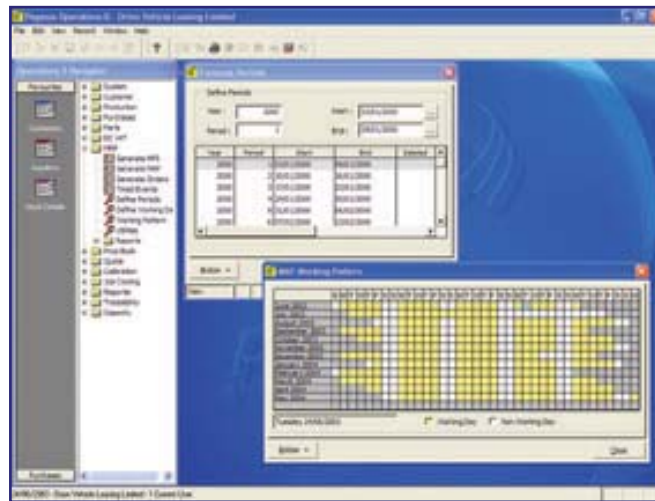

The ability to analyse business facts and identify developing trends in business is crucial. Such information can enable a company to make timely decisions that can have a direct impact on profitability. Extensive and definable analysis and reporting in Operations II allows the production of view screens and reports which can be acted upon: they can be concise, offer a snapshot view, or be as detailed as required.

## LOOK AND FEEL

Like all Pegasus products, Operations II screens have been designed with ease of use in mind. Users can elect to use a customisable slider bar, drop-down menus or a tree view similar to Microsoft Explorer.

## TODAY'S TECHNOLOGY

The open architecture of Pegasus Operations II allows more information to be processed simultaneously, multi-tasking and greater utilisation of hardware and operating systems. The additional benefit of Transaction Processing provides greater resilience against hardware or network failure and the kind of robust data integrity usually found in much larger systems.

## IMPRESSIVE FUNCTIONALITY

£ vs functionality — Operations II represents exceptional value for money. It is attractively priced and feature-rich, so a business can realise an instant return on its investment.

Whether it's Multi-company, Multi-currency or Multi-level Bill of Materials, Operations II provides all the functionality a progressive manufacturer requires. This includes; Work In Progress and Shop Floor Management, Sub-contracting, Actual to Standard Time Recording with Variance Analysis, Vendor Rating, Costing, Quotation Conversion Rates and definable Management Reports. Operations II is also fully E-mail and Internet enabled, allowing quotations to be E-mailed to customers and purchase orders sent to suppliers.

Stock control is core to the manufacturing system. In Operations II the stock records not only contain details on the Bill Of Materials and Routing through the shop floor required to manufacture an assembly, but they also hold the Drawing Number and Issue Number. It is possible to manufacture to back issues of a part code, for example; in the manufacture of spares or superseded parts. Manufactured parts codes contain a variety of cost information including material, labour, overhead recovery, standard costs, average cost and so on. Job Costing will then show the actual costs incurred in the manufacture of a product, while the Traceability module will show details of which components went into which assemblies and to which customers these items were delivered.

Operations II is a fully integrated production control system ideal for any manufacturer operating in today's competitive market place.

## PEGASUS INSTANT MESSENGER

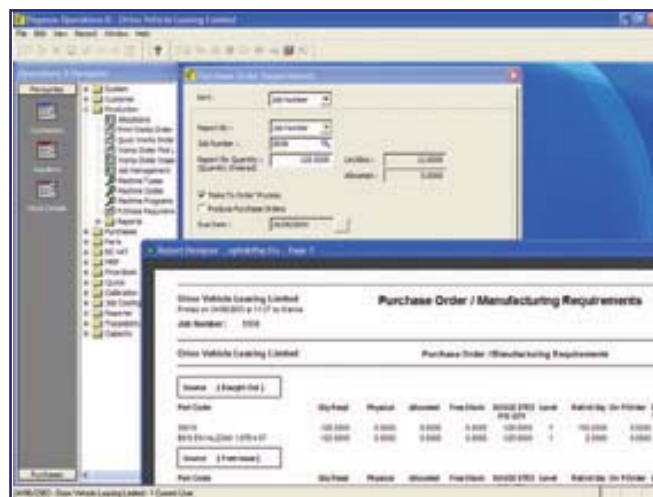

Businesses are becoming more and more reliant on their systems to perform to their maximum efficiency. Operations II does this and much more, it's a proactive solution, enabling information to be distributed automatically to the relevant recipients in the form of an instant message.

This easily configurable facility provides organisations with the ability to quickly define, via a user-friendly wizard, business rules or criteria which can be monitored on a periodic basis. When a business rule is broken or certain criteria met, a user definable message is sent automatically to the relevant recipients on the network alerting them to the information in a pop-up window. Alternatively, a text or HTML format E-mail can also be sent.

Providing dynamic information in this format puts employees in control and allows more informed business decisions to be made.

Examples of Alerts:

- Escalate overdue Works Orders to the Production Manager
- Monitor stock levels dynamically to enable the Purchase/Production Manager to operate a 'Just in Time' approach to stock
- Warn the Budget Holders of accounts which are outside the budgetary control thresholds

## CUSTOMISATION FACILITIES

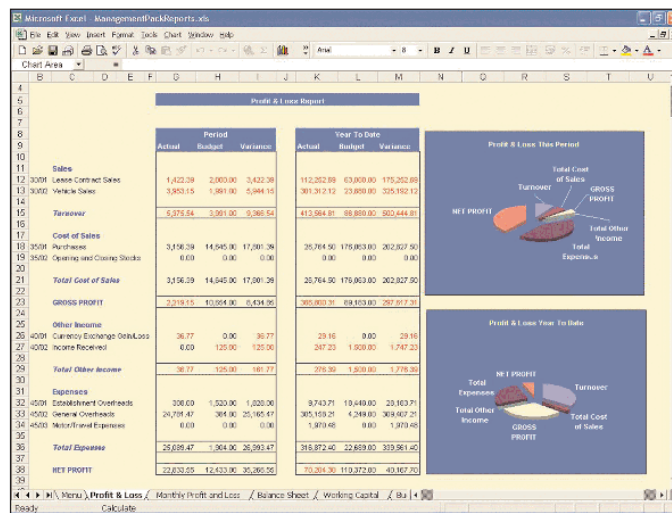

Pegasus Operations II is fully Windows-compatible, with an easy familiarity in both appearance and navigation. The Developers' Toolkit makes it easier still, allowing customisation to fit more closely with the way a company does business or to fulfil any special requirements.

- Customise screens: remove fields, add new fields, add new tab frames, add buttons and change the description of fields
- Put conditions (database rules) on fields: for example, make fields mandatory, prevent fields being edited or enforce certain conditions, such as ensuring that the individual using the form cannot change the selling price, or that a price is not edited below a certain margin
- Add items to Operations II menu structures (new functionality or external applications) — navigator, pull down menus, modify the toolbar — and take full advantage of the Pegasus Operations II security model

## INTEGRATED ACCOUNTING: OPERA II

Integration means that the finance functions need not be divorced from the manufacturing functions. As sales and purchase orders are entered, their ledger accounts are accessed, and if they are outside their trading terms or are on 'stop', the operator is informed. Depending upon the operator's security rights, it is possible to prevent that order from being entered and deliveries being made. Information recorded by the accounts department is available to the order processing personnel. Sales invoices raised and purchase invoices received will automatically be transferred to their accounts in Pegasus Opera II. The Nominal Ledger will be updated with these postings, so ensuring that accurate and up-to-date information is readily available across the whole system.

For manufacturers it is clear that having an accounting solution that runs stand-alone is no longer good enough. Pegasus provides the ideal solution by integrating accounting and manufacturing with Opera II and Operations II.

### ARCHITECTURE

Microsoft Visual Studio ■ Windows 2003/2000 Server ■ Citrix Metaframe XP (Standard Edition) ■ Novell Netware ■ Windows XP/2000 Professional ■ Modular

### FINANCIAL MANAGEMENT

Multi-Currency ■ Multi-Company ■ Multi-Level Bill of Materials ■ Shop Floor Routing ■ Material Requirements Planning ■ Full Traceability to serial number level ■ Profit analysis against Jobs ■ Comprehensive Drilldown ■ Optional link to the Pegasus Opera II accounting solution

### INFORMATION MANAGEMENT

User Definable Reports ■ Tailoring of standard Reports ■ Pegasus Instant Messenger ■ Security controlled by Operations II Security Manager

### TAILORING AND INTEGRATION WITH OTHER SYSTEMS

E-mail and Internet Enabled ■ OLE — Object Linking and Embedding facilities ■ Output to MS Excel and MS Word ■ System-wide preferences per user ■ Developers' Toolkit for customisation requirements
